Short Description:

LogTag Online

Description:

Implement LogTag Online with Wi-Fi-enabled data loggers at select AHMG Urology clinics to provide real-time notification when medication storage temperatures move outside established parameters. The solution will supplement existing temperature-monitoring processes by enabling clinic leaders to respond promptly to power outages or temperature excursions.

Is there a project? No  
Is there a Demand? Yes  
Demand Real-Time Medication Temperature Monitoring and Alerting (LogTag Online)  
Target Project Start 11-30-2026  
Target Project Finish 02-28-2027  
Description Implement LogTag Online with Wi-Fi-enabled data loggers at select AHMG Urology clinics to provide real-time notification when medication storage temperatures move outside established parameters. The solution will supplement existing temperature-monitoring processes by enabling clinic leaders to respond promptly to power outages or temperature excursions.  
Business Case AHMG Urology clinics store high-cost frozen medications, with some medications valued at approximately \$60,000 per dose. Current data loggers provide required temperature monitoring but do not provide the real-time alerting needed to notify clinic leaders when a temperature excursion or power outage occurs. Without timely notification, staff may not become aware of an issue soon enough to relocate medications to appropriate alternate storage, creating avoidable financial loss and operational and medication-management risk. LogTag Online provides the alerting capability needed to support earlier intervention. The proposed solution also addresses deployment constraints associated with the existing enterprise RTLS option at locations where required facility mapping is unavailable. Implementation requires completion of the IT security risk assessment, contracting for the subscription, and appropriate network/firewall configuration.  
Vendor Name MicroDaq  
Identify the vendor technical contacts Ed Lombardi (603)746-5524 ext 225 ed@microdaq.com
