## Details

## Description:

Implement LogTag Online with Wi-Fi-enabled data loggers at select AHMG Urology clinics to provide real-time notification when medication storage temperatures move outside established parameters. The solution will supplement existing temperature-monitoring processes by enabling clinic leaders to respond promptly to power outages or temperature excursions.

## Business Case:

AHMG Urology clinics store high-cost frozen medications, with some medications valued at approximately \$60,000 per dose. Current data loggers provide required temperature monitoring but do not provide the real-time alerting needed to notify clinic leaders when a temperature excursion or power outage occurs. Without timely notification, staff may not become aware of an issue soon enough to relocate medications to appropriate alternate storage, creating avoidable financial loss and operational and medication-management risk. LogTag Online provides the alerting capability needed to support earlier intervention. The proposed solution also addresses deployment constraints associated with the existing enterprise RTLS option at locations where required facility mapping is unavailable. Implementation requires completion of the IT security risk assessment, contracting for the subscription, and appropriate network/firewall configuration.

## Goals &amp; Benefits:

Provide timely visibility into medication storage conditions so clinic teams can intervene before temperature excursions result in medication loss.

Protect high-value medication inventory: Reduce the risk of losing costly medications because of undetected power outages or temperature excursions.  
Enable timely intervention: Provide real-time alerts so responsible clinic personnel can move medication to appropriate alternate storage when necessary.  
Support a scalable monitoring approach: Establish an approved solution for the initial Urology locations that can be considered for additional clinics with similar monitoring and alerting needs.

## Status - Executive Summary:

## Notes

## Work notes:

08-20-2026 12:33:35 PM - Mary Menardi (Work notes)

The security risk review is completed with a recommendation to proceed.

08-20-2026 12:33:11 PM - Mary Menardi (Work notes)

@Courtney Lay I can confirm that another product from this vendor is in use widely across the enterprise but this is a new cloud enabled version. AHMG practices in Colorado are required to use MicroDaq due to state-provided vaccines that are being stored there. We are not able to use Aeroscout which is our standard in AH.

08-11-2026 01:29:59 PM - Courtney Lay (Work notes)

Hey @Mary Menardi Are you able to confirm if this is a new vendor/product? Can you confirm we do not already have a solution for this?

| DDR0005151 | Contract risk process | Rene Albarran | Mary Menardi | MicroDAQ    | Real-Time Medication Temperature Monitoring and Alerting (LogTag Online) | Wifi enabled data logger for temperature monitoring | Implement LogTag Online with Wi-Fi-enabled data loggers at select AHMG Urology clinics to provide real-time notification when medication storage temperatures move outside established parameters. The solution will supplement existing temperature monitoring processes by enabling clinic leaders to respond promptly to power outages or temperature excursions. |                             | Reviewer Name: Rene Albarran<br><br>Review Date: 08-13-2026<br><br>Reviewer Recommendation: LogTag Online (LTO). It is a cloud-based environmental monitoring and data management platform used with LogTag data loggers. It collects, stores, analyzes, and reports temperature, humidity, and other environmental/logger data, with dashboard alerts, reporting, and data sharing. | Reviewer Name: Shayla Gibbs<br><br>Review Date: 08-17-2026<br><br>Reviewer Recommendation: TR Complete d. Recommended with no Technical Risks Proceed with the contract, no technology risks identified. The solution aligns well with AdventHealth technology standards and there were no technical risks identified. |                      | Reviewer Name:<br><br>Review Date:<br><br>Reviewer Recommendation: |
